

A New Era for Clinical Trials

The challenging time prompted by COVID 19 has changed our lives and triggered the use of new technologies in healthcare such as telemedicine, artificial intelligence (AI), voice search, chatbots and virtual reality (VR) for the clinical research and healthcare community.

Join us to learn more about the benefits of using telemedicine and individualized hands-on initiatives to reduce risk of transmission among patients and staff during the pandemic and improve operating costs.

Thursday: September 10, 2020
